

ABSTRACT OF THE DISCLOSURE

An improved transfer apparatus and method is disclosed for transferring a template of an object from a first surface to a second surface. The transfer apparatus comprises a
5 foam member having a first and a second side with a weak adhesive disposed on the first side of the foam member and a strong adhesive disposed on the second side of the foam member. The foam member is fashionable in the shape of the object for creating a template and is temporarily affixed to the first surface by the weak adhesive of the foam member.

The template is transferred from the first surface to the second surface upon engagement of
10 the second surface with the strong adhesive of the foam member. The withdrawal of the second surface from the first surface detaches the template from the first surface for transferring the template from the first surface to the second surface.
